DETAILED ACTION

Allowable Subject Matter

1. Claims 1-5, 7-16, 18-27, 29-33, 40-44, 46-53, 55-62 and 64-66 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Applicant invention is drawn to a system and method for providing caller information across heterogeneous networks. A Name Resolution Adapter (NRA) receives a message from a destination central office that includes a caller's telephone number and a call recipient's telephone number. The NRA retrieves a call recipient contract and caller authorization entries, and identifies caller fields that the call recipient is authorized to receive. The NRA includes the identified caller fields in a message to a Service Control Point (SCP), whereby the SCP retrieves caller attributes corresponding to the caller fields from a Line Information Database (LIDB). The SCP forwards the caller attributes to the NRA. In turn, the NRA includes the caller attributes in a message and forwards the message to the call recipient over a computer network. The call recipient processes a corresponding telephone call using the caller attributes that are included in the message.

Prior art of record failed to teach in combination the method and system for processing caller information across heterogeneous networks comprising: method comprising: receiving a message over a computer network, the message corresponding to an incoming telephone call and including caller attributes; retrieving a customer profile using the caller attributes; and processing the incoming telephone call using the customer profile wherein the name resolution adapter is adapted to: look-up a call recipient agreement; identify the caller attributes included in the call recipient agreement; and return the identified caller attributes in the message.
